

Features

by SuperBonBon

This software includes the following features :

- Easy of use implementation of the UPNP# protocol.
- Bridge between JMX and UPNP# devices to access UPNP# Devices with JMX MBeans or expose the JMX interface as UPNP# Devices.
- HTTP based console to control your network's UPNP# devices services.
- Utils to have transparent NAT enabled Remote Objects, all you need to have is an Internet Gateway Device on your network and do a very small modifications to your remote object class.
- Internet Gateway Device implementation to easily do NAT mappings with UPNP# IGDs on your network.
